Poids medias et snapshots locaux

Nombre d'appels API au premier chargement

Pour identifier spécifiquement les appels API dans de réseau de l'inspecteur, il faut filtrer par type de ressource (souvent marqué comme **XHR** ou **Fetch**) ou examiner les en-têtes et le contenu de la réponse pour confirmer qu'il s'agit d'un échange de données application plutôt que d'un document web standard.

Home :

Name	Status	Type	Initiator	Size	Time
home	200	fetch	HubApp.tsx:120	5.6 kB	16 ms
